

SILICON VALLEY IS OUR BACKYARD

Precision. Sustainability. Speed. These are the primary facility concerns of advanced technology clients. Their projects are frequently highly technical and often call for aggressive schedules to keep pace with product innovation and the competition. As a California builder headquartered in Sunnyvale – the heart of Silicon Valley – building for tech companies is hard-coded into our experience.

We have an enviable track record of completing successful tech construction projects, including clean rooms, server rooms and R&D labs. Complex mechanical, electrical, plumbing and fire protection (MEPF) systems are the industry norm and require intricate coordination and oversight. Our in-house MEPF and BIM teams are experienced in managing these challenges, thus avoiding costly clashes in the field. Advanced tech projects also typically require large energy loads. Our LEED expertise and MEPF oversight can help reduce future energy needs and costs.

REPRESENTATIVE CLIENTS

- ✔ Acuitus
- ✔ Baidu
- ✔ Google
- ✔ Microsoft
- ✔ Oracle
- ✔ SilevoSolar
- ✔ Amazon
- ✔ Facebook
- ✔ HGST
- ✔ Nokia

PROJECT TYPES

- ✔ Data/Call/Executive Briefing Centers
- ✔ Microelectronic Fabrication Facilities
- ✔ Software Engineering Laboratories
- ✔ Clean Rooms
- ✔ Server Rooms
- ✔ Research and Development Laboratories
- ✔ Engineer Work Spaces
- ✔ Kitchens and Cafeterias
- ✔ Seismic Upgrades

“ In the end, our building [Facebook MPK 20] finished ahead of schedule and under budget... It ended up costing us much less than any other major developments planned in Silicon Valley and taking way less time to build. - from Mark Zuckerberg's Facebook wall
