

HIGH-PERFORMANCE WORK SPACES

Level 10 is currently ranked the largest builder of corporate office space in Silicon Valley (according to ENR California 2019). But our work is not just about scale. It's about the long term. When we sign a corporate office client, we tend to work with them on multiple projects.

Much of our corporate campus work is based on our strong and collaborative relationships with top tier companies, many of whom are in the technology and biotech/life science space. Recent corporate space clients include Amazon, Baidu, Facebook, Google, HGST, Oracle and Qualcomm, among others. We consistently meet metrics for speed, budget, quality, sustainability and safety, whether it's a 55-story downtown San Francisco high-rise or a small tenant improvement project. By aiming for the highest level of performance to gain our clients' trust, we are able to earn their repeat business.

“ Every large project is a series of problems in search of solutions. The team at Level 10 knows how to categorize, prioritize and analyze problems. They encourage and expect creative options from the team. They get decision makers in the room, drive towards a solution and clearly communicate a single path forward. The 181 Fremont team just got it done, over and over again.
